

## Google Dorks for 2019 – Finding Insecure Websites

## Google Dorks for 2019 – Finding Insecure Websites

Find any Microsoft Frontpage website with the username and password exposed. This is amazingly stupid.

```
intext:"-FrontPage-" ext:pwd inurl:(service | authors | administrators  
| users)
```

---

This is an example.

```
# -FrontPage-  
therose:WK7JNgYcDkzac
```

---

A Similar search. This also finds websites with the password exposed. This is in the `_vti_pvt/service.pwd` file.

```
intext:"# -FrontPage-" ext:pwd inurl:(service | authors | administrators  
| users) "# -FrontPage-" inurl:service.pwd
```

---

An example of this.

```
# -FrontPage-  
admin:$1$E773NX74$0W00c952gkxgBmlitq7yT0
```

---

How to find PHPMyAdmin instances that are not secured, this really works well.

```
intext:"phpMyAdmin" "running on" inurl:"main.php"
```

---

Find many MySQL database dumps.

```
intext:"phpMyAdmin MySQL-Dump" "INSERT INTO" -"the"
```

---

Yet another search to find various MySQL dumps with passwords and other information.

```
filetype:sql "insert into" (pass|passwd|password)
```

---

The MD5 encryption standard is well outdated by now, but this Google Dork still finds websites using it...

```
filetype:sql ("values * MD5" | "values * password" | "values * encrypt")
```

---

Yet another Google Dork. This one can find backups of .htaccess files. This tells a penetration tester what permissions are existing on a server.

```
filetype:bak inurl:"htaccess|passwd|shadow|htusers"
```

---
