## 📖 README.md

# Awesome Vulnerability Research awesome

## 🐾 A curated list of the awesome resources about the Vulnerability Research

First things first: There are no exploits in this project. `Vulnerabilities != Exploits` A Vulnerability resides in the software itself, doing nothing on its own. If you are really curious about then you'll find **your own way** to discover a flow, this list aimed to help you **find it faster**.

Maintained by [Serhii Pronin](#) with contributions from the [community](#). Become the next  [stargazer](#) or  [contributor](#).

In case of emergency [gimme a shout](#)  [PGP key](#) fingerprint: `2B56 34F1 51A3 84E0 A039 7815 793A 1A66 A341 8A12`

made with  [passion](#) license  [CC-BY-SA-4.0](#) stars  [271](#)

Vulnerability Research is the process of analyzing a product, protocol, or algorithm - or set of related products - to find, understand or exploit one or more vulnerabilities. Vulnerability research can but does not always involve reverse engineering, code review, static and dynamic analysis, fuzzing and debugging.

## Purpose

Currently, there is **way more** insecure code out there than researchers. Much more people looking at code that's deployed in the real world are required by the market. This project exists to share a different awesome sources of information with you and encourage more people to get involved. Here you will find books and articles, online classes, recommended tools, write-ups, methodologies and tutorials, people to follow, and more cool stuff about Vulnerability Research and tinkering with application execution flow in general.

## Contributing

---

This List is published according to the *"Done is better than Perfect"* approach, so your contributions and suggestions are very valuable and are always welcome! There are two options:

1. Use the standard method of forking this repo, making your changes and [doing a pull request](#) to have your content added. Please check the [Contributing Guideline](#) for more details.
2. Occasionally, if you just want to copy/paste your content, I'll take that too! [Create an "Issue"](#) with your suggestions and I will add it for you.

- [RFPolicy 2.0](#) - Full Disclosure Policy (RFPolicy) v2.0 by [Packet Storm](#)

[Back to Contents](#)

## Research Papers

### Whitepapers

- 🔥 [TSIG Authentication Bypass Through Signature Forgery in ISC BIND \[PDF\]](#) - Clément BERTHAUX, Synacktiv, [CVE-2017-3143](#)

[Back to Contents](#)

### Individual researchers

- 🔥 [Taking Windows 10 Kernel Exploitation to the Next Level – Leveraging WRITE-WHAT-WHERE Vulnerabilities in Creators Update \[PDF\]](#) - Morten Schenk, originally presented at [Black Hat 2017](#)

[Back to Contents](#)

## Tools and Projects

- [Windbg](#) - The preferred debugger by exploit writers.
- [ltrace](#) - Intercepts library calls
- [ansvif](#) - An advanced cross platform fuzzing framework designed to find vulnerabilities in C/C++ code.

- [Metasploit Framework](#) - A framework which contains some fuzzing capabilities via Auxiliary modules.
- [Spike](#) - A fuzzer development framework like sulley, a predecessor of sulley.

[Back to Contents](#)

## GitHub repos

- [Google Sanitizers](#) - A repo with extended documentation, bugs and some helper code for the AddressSanitizer, MemorySanitizer, ThreadSanitizer, LeakSanitizer. The actual code resides in the [LLVM](#) repository.
-  [FLARE VM](#) - FLARE (FireEye Labs Advanced Reverse Engineering) a fully customizable, Windows-based security distribution for malware analysis, incident response, penetration testing, etc.
- [hackers-grep](#) - The hackers-grep is a tool that enables you to search for strings in PE files. The tool is capable of searching strings, imports, exports, and public symbols (like `woah`) using regular expressions.
- [Grinder](#) - Grinder is a system to automate the fuzzing of web browsers and the management of a large number of crashes.
- [Choronzon](#) - An evolutionary knowledge-based fuzzer
- [boofuzz](#) - A fork and successor of Sulley framework
- [s a n d s i f t e r](#) - The x86 processor fuzzer

# Companies and Jobs

---

[Back to Contents](#)

## Coordinated Disclosure

---

- [SecuriTeam Secure Disclosure \(SSD\)](#) - SSD provides the support you need to turn your experience uncovering security vulnerabilities into a highly paid career. SSD was designed by researchers, for researchers and will give you the fast response and great support you need to make top dollar for your discoveries.
- [The Zero Day Initiative \(ZDI\)](#) - ZDI is originally founded by TippingPoint, is a program for rewarding security researchers for responsibly disclosing vulnerabilities. Currently managed by Trend Micro.
