End Notes:

What Is Google Dorking?

Google Dorking is also known as Google Hacking. It is a hacking technique mostly used by hackers/cracker to find out the vulnerable website and exploit that vulnerability to extract the information.

To do this they make use of Google advanced search operators and SQL dorks injection

What Are Search Operators?

Search Operators are strings that are used to narrow down the search results. When you use search operators and incorporate the keywords with them these operators force search engines to show the specific result.

Here is an example:

When I simply typed **Products** in Google I got the result as shown below:

Now if I want to get the list of Sites that contain a specific term in URL I will make use of Inurl operator.

This query will filter out all the list of sites that contain the Products keyword in it. This is just a single example you can make use of various search operators to get the desired result.

What Is Carding?

Carding may be defined as the process of trading personal details such as Credit Cards and Banking Details.

Once hacker got access to your Credit Cards and Banking details they can cash them out or even can use for illegal works. You can find people selling Credit cards details over the Internet and over Dark Web.

Shubham, I am a graduate of Business Administration but since IT/ICT is the future of the world/universe, I will really appreciate it if you can teach/mentor me to be a good ethical hacker. I do not have any idea of hacking so I will consider myself a beginner but i am a fast learner naturally. I know with you,

determination and dedication I will achieve my dreams in good short time.
Please keep the good work going.

Thanks.

Ade.
