problem unpacking with x64dbg

Hi ! I'm learning unpacking techniques and I'm trying to manually unpack a malware packed with UPX. I did it with Ollydbg and Ollydump plugin without problems.

But when I do exactly the same with x64dbg and scylla (setting the right OEP and "Get imports" then "Dump") the dump looks like the unpack version of the malware but when I run it I have this error : "The application was unable to start correctly (0xc0000005). Click OK to close the application. "

I wish you could help me find out what's the problem... Thank you !
